DITM 2123

SEMESTER II

SESI 2025/2026

OBJECTIVE

Develop a simple **Movie Ticket Booking System** using **HTML, CSS, and JavaScript**.

The system should allow users to enter customer information, select a movie, calculate ticket payment, and display the booking summary dynamically.

INSTRUCTIONS

You are required to create a web page named:

labtest1_groupB.html

The system must contain the following components:

PART A: HTML STRUCTURE

1. System Title

Display the following title at the top of the page:

Student Movie Ticket Booking System

2. Movie Poster Image

Insert ONE movie poster image into the system. Use image provided.

3. Customer Name

Create a text field for the customer to enter their name.

4. Movie Selection

Create a dropdown list containing the following movies:

Movie	Ticket Price
Avengers	RM15.00
Frozen	RM12.00
Kung Fu Panda	RM10.00

5. Number of Tickets

Create an input field for the customer to enter the number of tickets.

6. Seat Type

Create radio buttons for seat type:

- Normal Seat → RM0.00
- Premium Seat → RM5.00

7. Buttons

Create TWO buttons:

a) Dark / Light Mode Button

This button should switch between:

- light mode
- dark mode

b) Calculate Payment Button

This button should:

- calculate ticket payment
- display booking summary

8. Output Section

Create an output section using `<div>`.

The output section:

- must be hidden initially
- only appears after the Calculate Payment button is clicked

PART B: CSS STYLING

Apply CSS styling to make the system look clean and organized.

Your styling must include:

1. Container Styling

- Center the container
- Add padding
- Add border radius
- Add background color

2. Image Styling

- Control image size
- Add rounded corner

3. Input Styling

Apply same styling for:

- text input
- number input
- dropdown list

4. Button Styling

Style the buttons with:

- background color
- hover effect
- padding
- rounded corner

5. Dark Mode Styling

When dark mode is activated:

- background changes
- text color changes
- container color changes

PART C: JAVASCRIPT FUNCTIONALITY

Create JavaScript functions for the following tasks.

1. Dark / Light Mode Function

Create a function to:

- switch between dark mode and light mode

2. Retrieve User Input

Retrieve:

- customer name
- selected movie
- ticket price
- number of tickets
- seat type

3. Input Validation

Display alert message if:

- customer name is empty .
- movie is not selected .
- ticket quantity is empty .
- ticket quantity is less than 1 .

4. Payment Calculation

Use the following formula:

$\text{Ticket Total} = \text{Ticket Price} \times \text{Number of Tickets}$

$\text{Final Payment} = \text{Ticket Total} + \text{Seat Charge}$

5. Display Current Date

Display today's date using JavaScript.

Format:

DD/MM/YYYY

6. Display Booking Summary

Display the following information dynamically:

- Date
- Customer Name
- Selected Movie
- Number of Tickets

- Ticket Total
- Seat Charge
- Final Payment

EXPECTED OUTPUT

The system should:

- ✓ Allow user to enter booking information
- ✓ Calculate payment correctly
- ✓ Display booking summary dynamically
- ✓ Support dark mode and light mode
- ✓ Apply proper CSS styling
- ✓ Validate user input before calculation

MARKING SCHEME

Section	Marks
HTML Structure	12
CSS Styling	10
JavaScript Functionality	18
Output Display	5
Dark / Light Mode	3
Input Validation	2
Total	50
